

# Merge Overlapping Intervals

Given an array of intervals, merge all the overlapping intervals and return an array of non-overlapping intervals

Ex:-  $[1, 3], [2, 6], [8, 10], [15, 18]$

output :  $[1, 6], [8, 10], [15, 18]$

First Sort  
array  
intervals

if you mark the given intervals

This portion  
is overlapping  
so, we merge

Merged interval

\* We have to make sure that, in final ans, there won't be any overlapping intervals

### Intuition

\* Iterate from  $0 \rightarrow n$

↳ as initially, Our ans list is empty, we add first element into it

\* Observations

$$\text{if } (\text{currentInterval}[i][0] < \text{lastInsertedarray}[i]) \\ \left\{ \begin{array}{l} \text{lastInsertedarray}[i] = \max(\text{currentInterval}[i][1], \text{lastInsertedarray}[i]) \end{array} \right.$$

Case - I

If the Current interval can be merged with the last inserted interval of the answer list :

Ex:-  $[0, 2] \text{ } \text{Comparator 1} \text{ } [1, 4] \text{ } [8, 10]$

ans list  $[0, 2]$  → update this  
Comparator 2

Comparator 1 → Current Interval  
Comparator 2 → last Inserted Interval

1 is in range of this list  
So update  $\text{anslist}[x][1]$  with max of Both Comparators

Update → last inserted interval's end

maximum (current interval's end, last inserted interval's end)

Case - II

If the current interval cannot be merged with last inserted interval of answer list

↓  
we insert the current interval in the answer list  
and update last inserted interval as current interval

$if(\text{currentInterval}[i][0] > \text{lastInsertedInterval array}[1])$

To Sort 2D array  $(arr[i][j])$

① `Arrays.sort(arr, (a, b) → Integer.compare(a[0], b[0]))`

② `Arrays.sort(arr, new Comparator<Int[]>() {`

`public int compare(int a[], int b[])`

`{ return a[0] - b[0];`

`}`

`});`

Tc :-  $O(n \log n) + O(n)$

Sc :  $O(n)$

Dry Run

$arr[i] \Rightarrow [1, 3], [2, 6], [8, 9], [10, 13], [11, 12], [14, 15]$

i	Current Interval Start	Last Interval End	check Merge	Current Interval End	update Last Interval End
1	$[2, 6] \rightarrow 2$	$[1, 3] \rightarrow 3$	$2 < 3 \checkmark$	6	$[1, 6]$
2	$[8, 9] \rightarrow 8$	$[1, 6] \rightarrow 6$	$8 > 6 \times$	$\times$	$[1, 9]$
3	$[10, 13] \rightarrow 10$	$[8, 9] \rightarrow 9$	$10 > 9 \times$	$\times$	$[10, 13]$
4	$[11, 12] \rightarrow 11$	$[10, 13] \rightarrow 13$	$11 < 13 \checkmark$	12	$[10, 13]$
5	$[14, 15] \rightarrow 14$	$[10, 13] \rightarrow 13$	$14 > 13 \times$	$\times$	$[14, 15]$
